

CANEXIS™

Integrated Workflow Solution for Endoscopy

**Complete
Management
of your
Endoscopy
Department**

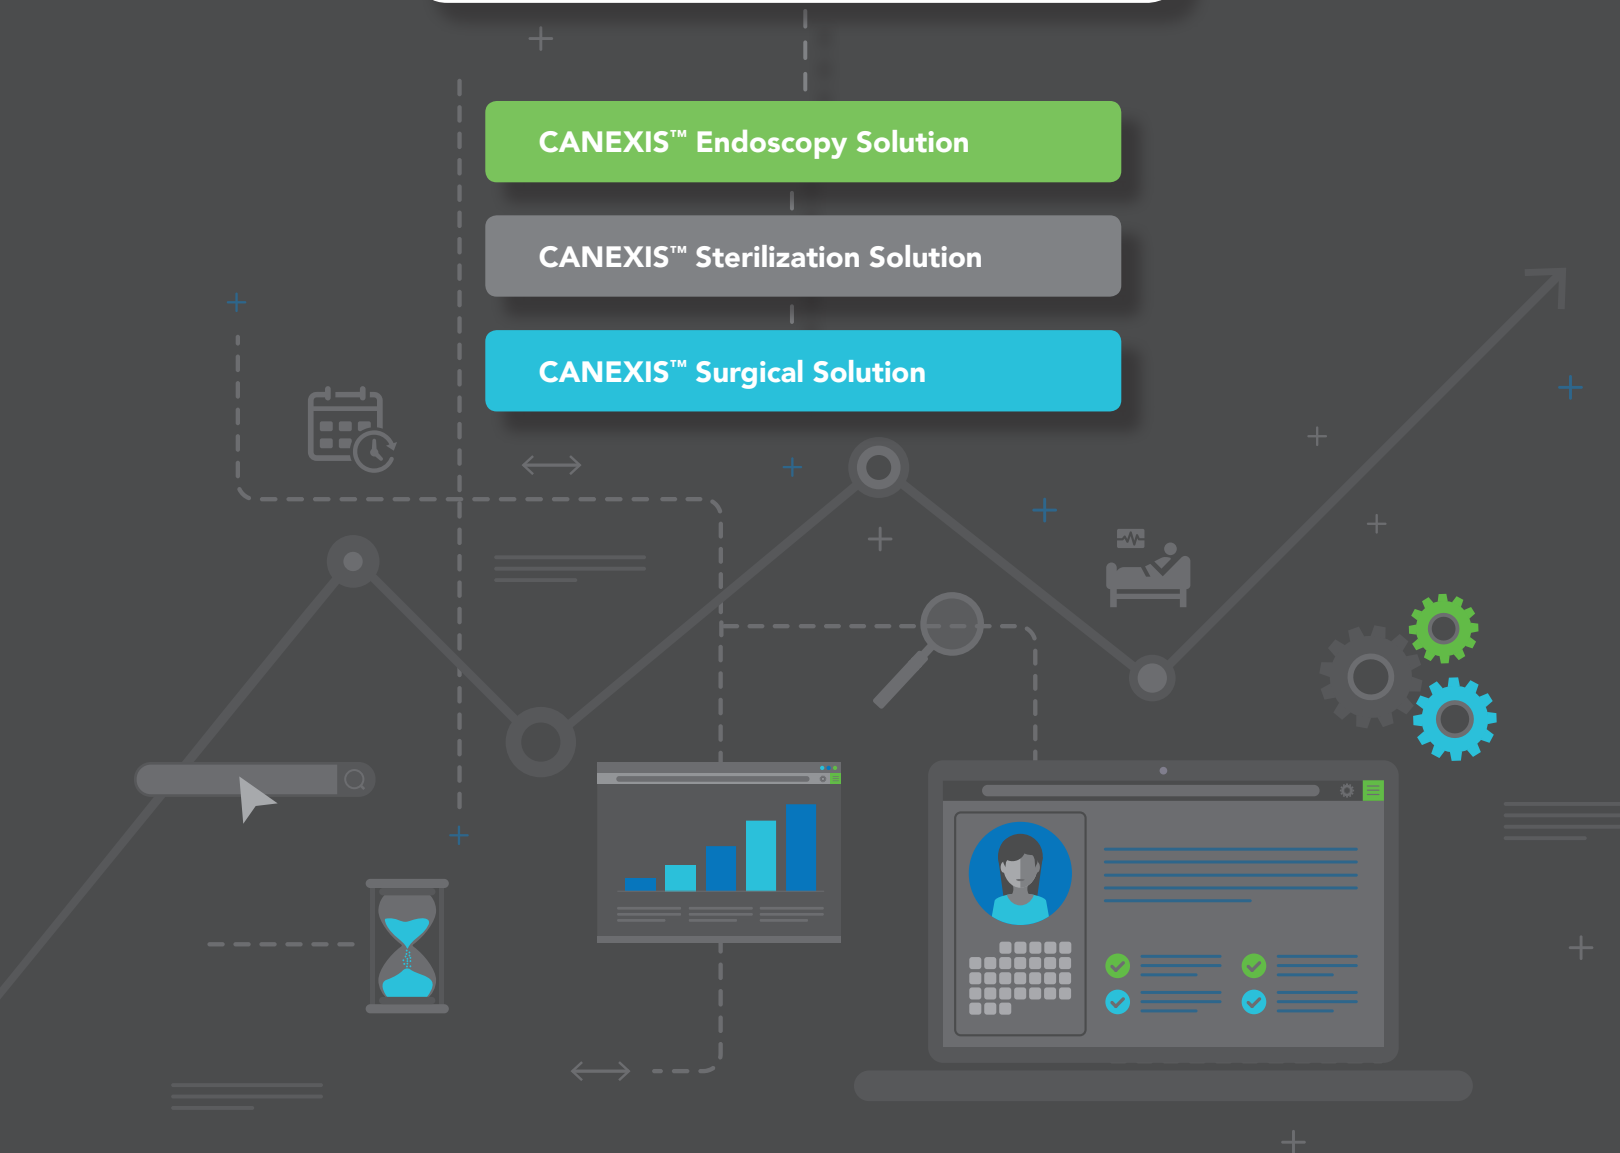

CANEXIS™ Integrated Workflow Solution links data and decision making to support the efficient operation of your critical hospital departments. The fully-integrated functionality of our suite of modular products brings together disparate departmental software into one powerful tool.

CANEXIS™ Integrated Workflow Solution

CANEXIS™ Endoscopy Solution

CANEXIS™ Sterilization Solution

CANEXIS™ Surgical Solution

A POWERFUL TOOL TO MANAGE AND ELEVATE ALL ASPECTS OF YOUR ENDOSCOPY DEPARTMENT

CANEXIS™ Endoscopy Solution was developed in close collaboration with endoscopy experts to create a user-friendly tool that gives you peace of mind that your facility is always executing best practices and empowers you to do more with the resources you have.

The software is flexible and configurable to support your unique workflow needs. Unparalleled quality management tools and the ability to achieve full traceability of your procedures and endoscopes make CANEXIS Endoscopy Solution the most useful tool on the market to manage your endoscopy department.

Unparalleled quality management tools and the ability to achieve full traceability of your endoscopes make CANEXIS Endoscopy Solution the most useful tool on the market to manage your endoscopy department.

PLAN. TRACK. ELEVATE.

SOFTWARE TO SUPPORT YOUR WORKFLOW NEEDS

CANEXIS™ Integrated Workflow Solution for Endoscopy		
 Reprocessing Module	 Procedure Module	 Planning Module
Reprocessing Workflow	Link Endoscope to Patient	Procedure Scheduling
Status and Location Dashboard	Patient Flow Monitoring	Patient Information
Repair and Loaner Management	Procedure Documentation	Endoscope Reservation

DO MORE WITH THE RESOURCES YOU HAVE.

CANEXIS Endoscopy Solution makes your whole department more efficient, frees up your time for higher priority activities and helps you better use the resources you have. For example, instead of relying on your technicians to sort through endoscope tags, let the software manage your hang time for you, or better manage your workflow to schedule more patients each day.

EASILY SHARE INFORMATION WITH YOUR EHR.

CANEXIS Endoscopy Solution integrates with your electronic health records system and makes accessing scheduling and patient information easy. In addition, the software automatically associates the endoscope with the patient. That information can be easily transferred to your current EHR.

TRACK AND MONITOR YOUR ENDOSCOPES.

At a glance you are able to determine the status and location of your entire endoscope inventory. Know which endoscopes are ready for use. Track which endoscopes are out for repair and see trends over time to help you make repair vs. replace decisions. Identify which endoscopes need to be reprocessed and where in your facility they are located.

CONFIDENTLY KNOW THE HISTORY OF YOUR ENDOSCOPES.

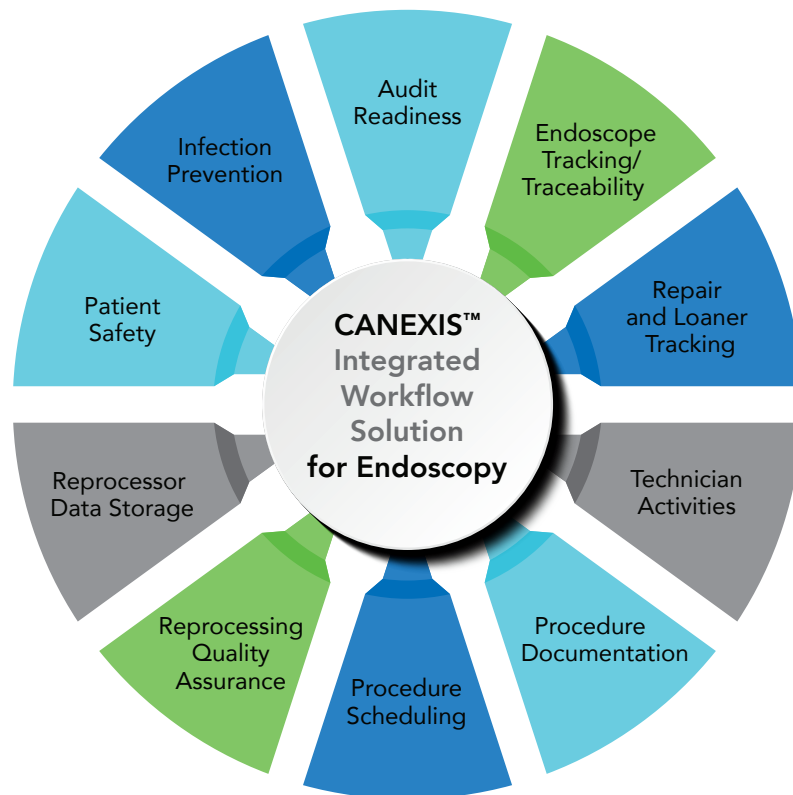

Knowing the history of your endoscopes means knowing which patients an endoscope was used on, who reprocessed it, which AER it was reprocessed in and when it was last out for repair. Not only that, but you will also have a record that every required step was followed during reprocessing.

A SINGLE, INTEGRATED INTERFACE TO ELEVATE ALL ASPECTS OF YOUR ENDOSCOPY DEPARTMENT

CANEXIS™ Integrated Workflow Solution for Endoscopy gives you visibility across your department in one powerful tool. The software allows you to monitor every step of your patient's

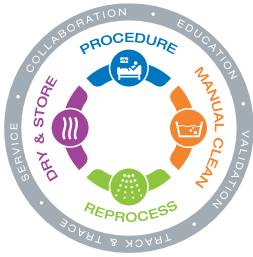

experience in your department to support quality patient care. The traceability, ownership and accountability that the software delivers helps support patient safety and infection prevention.

INFORMATION AT YOUR FINGERTIPS

The reporting tool available within CANEXIS Endoscopy Solution provides powerful analytics to help you make informed, evidence-based decisions about your endoscopy department.

The tool offers standard reports that provide quick access to some of the most frequently requested information about endoscopes and endoscopic procedures. These reports can easily be generated by any manager for audits or infection-related recalls without having to call IT. There are more than 35 standard reports available, but if you need specialized information, the custom reporting option gives you the flexibility to create a report specific to your unique needs.

THE COMPLETE CIRCLE OF PROTECTION

For more than 40 years Cantel has been delivering innovation and excellence in endoscope reprocessing. We offer a comprehensive line of endoscope reprocessing products including market-leading detergents and disinfectants, technologically advanced automated endoscope reprocessors, transportation systems, drying and storage cabinets and equipment tracking systems.

Our ecosystem of product and service offerings comes together in our **Complete Circle of Protection**, an infection prevention program designed to help you streamline reprocessing workflow, improve department efficiency and reduce the risk of infection.
